PROFILE

Business-analysis-oriented software professional with 6 months of industry experience at SELISE Digital Platforms, translating business and regulatory requirements (multi-country payroll and tax rules) into working systems. Experienced in requirements validation, API testing, defect identification, and technical documentation across the full software lifecycle. Comfortable working with business analysts, developers, and finance/HR stakeholders to bridge business needs and technical implementation. Building toward a career in Business Analysis / Quality Assurance.

WORK EXPERIENCE

Associate Software Engineer *SELISE Digital Platforms*
Jan 2026 – Present Dhaka, Bangladesh

- Owned development of the Bhutan payroll module – salary calculation, tax deduction, and payslip generation – coordinating directly with a business analyst to validate country-specific tax and compensation rules before implementation.
- Implemented country-specific payroll logic to reconcile differing tax and compensation rules between Bangladesh and Bhutan, translating regulatory requirements into working calculation logic.
- Built REST APIs (JavaScript, Corteza) to automate payroll workflows, and tested endpoints using Postman as part of ongoing quality checks.

Intern Developer – Finance and Legal *SELISE Digital Platforms*
Oct 2025 – Dec 2025 Dhaka, Bangladesh

- Took primary ownership of building out the Payroll Bangladesh system on Corteza as an intern, including new modules for yearly employee review and promotion workflows – taking a business process from requirements through to a working system.
- Automated internal finance workflows for the Finance & Legal division, reducing manual processing steps in existing operational processes.

Intern – Information Technology Division *City Bank PLC*
Feb 2025 – May 2025 Dhaka, Bangladesh

- Gathered and consolidated requirements from multiple stakeholder groups – developers, business analysts, and independent research – to produce accurate technical documentation for 3–5 systems.
- Created process flow diagrams and system visuals using Draw.io to communicate system architecture to development teams.

- Organized documentation in Microsoft Word and SharePoint, maintaining version control and accessibility across teams.

SKILLS

Business Analysis & Testing: Requirements Gathering, Manual Testing, Functional Testing, Regression Testing, API Testing, Bug Reporting, Test Case Design, STLC, SDLC

Tools & Platforms: Corteza, Postman, Draw.io, GitHub, Jira, Microsoft Word, SharePoint

Programming & Development: JavaScript, Python, Node.js, Express.js, React

Database: PostgreSQL, MongoDB

Methodologies: Agile/Scrum

PROJECTS

Core Banking System – *Academic prototype of a modular banking system*

- Designed and built a full-stack banking simulation (React, Node.js, Express.js, PostgreSQL) covering user authentication, transactions, and loan management, working from a defined set of functional requirements.
- Designed a normalized relational database schema to enforce data integrity for financial records, and implemented an audit log and role-based access control to support accountability and traceability requirements.

EDUCATION

Bachelor of Science in Computer Science *BRAC University*
2021 – 2025 CGPA: 3.36 / 4.00
Coursework: Data Structures & Algorithms, Database Management Systems, Data Science, System Design
